

How to beautify your walls

We would like to thank our customer, Petra K., who wrote about her creative project and allowed us to print it here. These instructions explain an easy way of decorating your walls. The *WallPerfect W665* was used in this example.

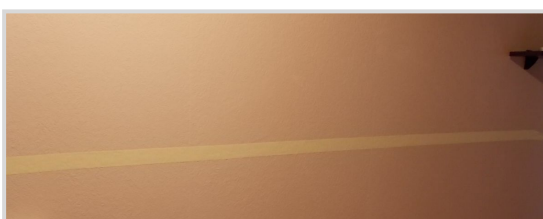

What to do:

1. Print the desired pattern on a piece of stronger card. We used letters in our example. Next, cut out the area that you want to appear in a different colour on the wall.

2. To make sure your template is attached to the wall in a straight line, create a guiding line with masking tape.

3. Attach the templates to the desired position with masking tape.

4. Cover the area you are working in with card. Thin the paint by 10% (observe the instructions provided by the paint manufacturer). Before you start spraying do a test spray.
5. Now spray the spaces in the template with the desired colour. Note that the nozzle is set to spot-jet to ensure that the paint does not go over the edge of the card. It is also important to set a low paint flow rate.
6. Before you remove the card letters, allow the paint time to dry a little so that it doesn't smear.

More instructions can be found at www.wagner-group.com/service.

Many thanks to our creative customer who has presented a number of other projects in her blog, which were all created using the *WallPerfect* W 665 device.
